

Description - Acetic Acid Recovery System.

Process Flow Diagram:

Process Description:

The feed mixture of Acetic Acid, Water and Ethyl Acetate is fed to the column where acetic acid purity 99.8% (Wt) is recovered as main product.

Operating Conditions:

Flow Rate: 500 Kg/hr.

Pressure: Column is operating under atmospheric pressure.

Temperature: 73.5°C -117.8°C.

Column Internals: Structured Packing for the column.

Design Purity: 99.8% (Wt).

Experience:

The S-Cube has designed and supplied this separating system.
